Mr. Tree Planter

I have to a want a short talk with you about trees this Spring. I have several thousand Peach, Cherry and Plum Trees, 2 to 3 and 4 feet high. They are fine trees, true to name and I must say that I find that the old man medicine has been失效 at the size the Cherry Orchard of 50 or 100 trees, as every farmer ought to have that many trees. In Plumas I have all the big ones that will bear in this country and I will not say all others can do it to a man that will plant 50 trees and let me select the kinds. It takes 50 or more trees to be successful as they need grouping. Also the great Keeper Apple, the one that does so well for the Southward, stays on the trees longer and has not failed to fruit since it commenced in O.T., some 9 years ago. And the genuine Winter Bartlet Pears: the trees have not blighted so far and the fruit sells at better prices than oranges at Christmas time and all through January. A large pear—a money maker. I have been two years satisfying myself as to the pear and have got to where we dare to plant it largely on our New Mexico land. The trees are some flat and some rounded, but worth the money. With these trees you can have large luscious pears at Holiday time to treat your friends with. I want you to give me a good order. I know I can serve you right. I have a good line of shade trees and other fruit trees, Roses and Plants. Can handle Evergreens so they will grow. Write me. Do not fool yourself by not doing so. I can do as well as any agent. Don't forget that.

The Original Keeper Tree

I can show you one that has stood for 37 years, and without care. Last year it produced 16 bushels of apples. This apple has made its way over all the south west as it was the only kind that will bear so far as I can find out, that stayed on the tree until picking time—the fruit is good, sells with the best of them. It has been faked by agents and some growers have been made money and reported they pay good money for them through agents. Do not buy of any man unless he can show proof from me. They are not quite as choice as some others. But the worth of the tree is not what you buy. But when the trees produce then it counts. I will not have a large supply of them this Spring—this season we are planting them in New Mexico and I only have four or five trees now out. But I think they are the best apple out. If you are planting Southwest, plant the KEEPER.

Accompanying out shows how we handle evergreens. They are round trees and perfect feet in every way and as strong to grow as is possible to get them. I have handled them for years that year. Of course they cost more, but the only way to get them, and in that way I have built up a large trade on them. I have a large supply of any kind of shade or dark red roses, besides other kinds of fancy trees and flowering trees and weeping trees, and nearly all the kinds, from the Symeon, Russian and Dowling Mulberry, Linden, Ash, Elm, Red Maple, Texas trees, and several others. Black Locust by the hundred thousand. So write me what you want and I will send you them and beautify your homes. Do not forget to ask me about Roses. Plant some of the beauties. Do not pay an agent tree prices. Get them here fresh from the ground.

What Others Say About the Keeper Apples

Kingsbury County, Okla., May 25, 1897.

Mr. A. V. Rement, Proprietor.

Dear Sir: As you have asked me to tell you what I think of the Keeper Apple I will say that all the drudgery varieties of apples that I have grown in my life here orchard I regard the Keeper as being the best in every way. The tree is a strong vigorous grower with dark green foliage and tolerates shade from any other tree I have in my orchard, and it comes into bearing as soon as any other variety. It is a true apple tree from first light or any other, as any other apple in my orchard. My Keeper trees bear every season. Last year they produced three hundred bushels of apples and 2000 bushels of pears, which is more than any tree in the ground. One apple grew as large as the Jonathan, and this year they are as full or fuller than last season. They make good eating apples, are firm and keep long through the winter, making it payable to ship them early in the season and make a good profit on them. Two or three varieties of apples fail to make a profit, as they do not keep through the winter. You will find these apples superior to either of the above kinds. I am experimenting to find another orchard in the fall or spring, and if I do they will all be Keepers.

Respectfully yours, M. L. King.

A T. REMER

The Wulne Nursery, A T. REMER, Proprietor

Aulne, Kansas.
